

## MRI Mountain Governance Bibliography

Version 1 – 3 September 2019

This online bibliography presents sources relevant to diverse dimensions of mountain governance. The bibliography is composed of publications recommended by members of the MRI Mountain Governance Working Group and respondents to our global survey on mountain governance challenges. The purpose of this online bibliography is to share resources among a broad audience of researchers, practitioners, scholars and others whose interests include governance of mountain social-ecological systems. It is an initial compilation that will grow as additional valuable resources are identified and added. It is not meant to be exhaustive, but to point to the range of published works relevant to mountain governance. Topics of interest include (but are not limited to): theories of governance; mountain political ecology; mountain hazards and disaster risk reduction; gender and governance; governance of mountain biodiversity, commons, and ecosystem services; mountain tourism governance; historical and current case studies on mountain governance and sustainability, and related topics. To our knowledge, this is the first online bibliography on mountain governance that is meant to expand. It welcomes sources published in English, French, German, Mandarin, Russian, Spanish (languages of the working group) and potentially other languages. The nature of research and scientific knowledge is such that this bibliography will never be complete. Rather, the goal is to provide an evolving resource for the diverse actors concerned with mountain governance.

Please contact Dr. Catherine Tucker ([tuckercml@gmail.com](mailto:tuckercml@gmail.com)) if you wish to recommend additions to this mountain governance bibliography. Please include a complete citation, abstract, keywords, and a pdf or link to the work. A reader familiar with the language and subject matter will review it to confirm relevance. Additions will be added periodically (several times a year). Currently we cannot offer pdfs of the references, but we will include links when available.
